Brow Lamination is an eyebrow perming treatment that involves correcting the brow shape by setting the hairs in place using a chemical solution. Brow lamination is a two step process. Firstly, a cream is applied that breaks down bonds in the eyebrow hairs so they can be manipulated into a new position. This is followed by a second cream that rebuilds these bonds and sets them in their new position. If you have unruly, flat or downward growing hairs, eyebrow lamination can change the direction of growth to create a more uniform look with a higher arch and a more desirable brow shape for up to 6 weeks.
