TREATMENTS THAT MAKE A DIFFERENCE

Is there a link between cosmetic treatments and body confidence? Re Fresh Aesthetics thinks so, when you believe you are looking better, you feel so much better too and here at Re Fresh we provide a confidential chat and consultation with advice on treatments to help you achieve that.

BOTULINUM TOXIN

Botulinum toxin is a muscle relaxant or anti-wrinkle injection for the temporary improvement in the appearance of moderate to severe lines and wrinkles. This treatment is suitable for almost anyone, is virtually pain free and takes approximately 15 minutes. It is a safe and established treatment and so the most popular aesthetic treatment. Results can be seen within a few days with full effect within 2 weeks. Anti-wrinkle injections remove the appearance of lines for both male and females with either a natural look still showing some lines and a softer appearance or removing them completely. This treatment is temporary and will last between 3-6 months.

DERMAL FILLER TREATMENTS

Dermal Fillers are made up of a substance called Hyaluronic Acid.

This substance is naturally found in our skin and gives our skin hydration and volume. As part of the ageing process our skin loses its elasticity and volume. Thus leading to thinning, and dehydrated skin which further contributes to wrinkle formation.

Dermal fillers can be used to restore volume and fullness, thus giving a more youthful appearance. They can also be used to enhance our natural features and contours such as lips, cheeks, jaw, chin, nose, eyes as well as creating slimming effects of the face.

The duration of results depends on the density and type of filler used as well as the area treated. Dermal fillers last from 6 months and 2 years.

MICRONEEDLING

What is a microneedling pen?

The microneedling pen is a revolutionary and most advanced micro-needling device, which aims to tighten, lift and rejuvenate skin.

How does microneedling work?

The motorised pen stimulates collagen induction by harnessing the body's ability to re-grow and repair the skin as a response to micro-damage. This small, hand-held device delivers up to 1,300 vertical micro punctures per second into the skin, thus stimulating the production of collagen and elastin and normalizing various skin functions.

What can the pen treat?

The microneedling pen can visibly improve the appearance of: *Fine lines/wrinkles/surgical, acne scars and trauma scars/stretch marks pigmentation/rejuvenation/mild rosacea*

Microneedling for skin rejuvenation

The pen promotes a process of new skin growth through the science of Collagen Induction Therapy (CIT). The most effective way to stimulate or "Induce" new skin is by micro-needling with the motorised pen vertical stamping method. This new stimulation can be done quickly and easily while keeping the epidermis intact and down-time to a minimum.

Acne Scars

The treatment can provide drastic results improving the appearances of the scars. The micro needles of the pen create new collagen and elastin to be generated and deposited called collagenesis, however the added benefit of new capillary growth is also a result which can improve blood supply to the area which helps create healthier existing skin as well as provide a healthy foundation for the new skin.

Re fresh's microneedling pen keeps the epidermis integrity full intact while treating the area which quickens healing time and causes less pain.

Scars

The challenge of a surgical scar lies within the matrix of all the forms or categories of the scars involving hypertrophic and keloid scars and pigmentation flaws. These scars thicken over time. The pen's unique vertical stamping and depth control up to 2.5mm makes treating scars superior to other methods or rolling. With surgical steel integrity, the robust nature of the automated needle tip (11 needles total and sized at thirty-three gauge) penetrate difficult scar tissue, dramatically improving appearance, texture, elasticity, size and mobility.

Stretch Marks

Various treatments are available for the purpose of improving the appearance of existing stretch marks, including laser treatments, dermabrasion, and prescription retinoids. Some cream manufacturers claim the best results are achieved on recent stretch marks; however, few studies exist to support these claims. The use of microneedling uses the bodies' natural solution for unsightly stretch marks.

New collagen growth and stimulation is more effective for reducing and fading stretch marks. microneedling does this through Collagen Induction Therapy (CIT).

The device allows for appropriate treatment needle depth to activate the cascade of fibroblast and growth hormone to generate more skin, collagen, and elastin for smooth and healthy coloured skin. The skin of the epidermis effectively thickens and becomes noticeably smoother therefore evening stretch marks is the result.

FAT DISSOLVING TREATMENTS

Re Fresh offer a range of fat dissolving treatments, including Aqualyx, Lipo Lax, and Deso Face. You can see more information about these treatments below, but please get in touch for help in understanding which is right for you. Based in Telford, we welcome customers from all over the Shropshire area, including Shrewsbury, Bridgnorth, Market Drayton, Newport, and Shifnal.

Aqualyx

Aqualyx is an injectable fat loss treatment. It is a gel-based solution, derived from Cholanic Acid, which is produced by our bile duct to help up break down fats. It is licensed for use in the UK for localised or spot removal of fat from areas such as the chin, knees, hips, thighs or under the buttocks and is generally regarded as safe. It is not a weight loss solution and is suitable for smaller, stubborn pockets of fat, not large area fat reduction. Aqualyx is a non-surgical way of body-shaping. This gel-based solution is injected into areas of unwanted fat. The solution works by disrupting the surface of the fat cells, causing them to weaken and become permeable. An ultrasound treatment is then used to push the fats out of the cells. The fat is then absorbed by the body and excreted. It is a permanent result assuming the person having the treatment doesn't gain weight after the treatment.

Lipo Lax

Lipo Lax an innovative fat burning therapy based on lipolysis that is simple and effective at diminishing cellulite and excess weight. Obtaining a slim figure without cellulite and excess weight is a challenge for most people. A sedentary lifestyle, improper diet and metabolic disorders lead to the formation of fat deposits and the notorious "orange peel", making it difficult for people to achieve their ideal physical bodies. Lipo Lax is a great way of removing the cellulite, lumps and bumps, dimples or orange peel on our bodies and works well in conjunction with Aqualyx or Deso.

Deso Face

Deso Face is state-of-the-art fat dissolving injectable products designed to treat those difficult localised pockets of fat. Areas that can be treated include chin, naso folds and cheeks, neck jowls and under the eyes Depending on the area treated and the amount of fat involved, several sessions may be required to achieve the desired result.

In line with similar injectable treatments like Aqualyx®, the active ingredient is Deoxycholic Acid, proven to reduce fat deposits for the right patients. The product is conveniently separated into a face and body concentration and side effects are minimal.

What are Vitamin B12 Injections?

Vitamin B12 is an essential, water-soluble nutrient for vitality and wellbeing. It aids your digestion, helps you to regulate mood, and assists in maintaining a healthy immune system.

If you have low Vitamin B12 levels, you may find you have symptoms such as:

Fatigue
Stress
Loss of appetite
Low moods
Faintness
"Brain fog"
Pale skin.

When suffering from a Vitamin B12 deficiency, injections are the most effective solution for delivering the nutrient to your body. The full dose is delivered straight into your system, enabling you to feel happier, vibrant and more energised. As with all vitamins, Vitamin B12 is a vital component to any healthy and active lifestyle.
